

ARTUR YUSUPOV

Fullstack WordPress Developer | React/Next.js Developer | Technical SEO |
AI-Augmented Specialist

Contacts:

- **Phone / WhatsApp:** +34642413967 (Spain)
- **Telegram:** @develop_create
- **Email:** web.sunline@gmail.com
- **Portfolio & GitHub:** <https://yusupovwebart.github.io/Portfolio/>
- **Location:** Spain (Open to remote / relocation / hybrid)
- **Languages:** English (B2 - Upper-Intermediate), Spanish (B1 - Intermediate), Ukrainian & Russian (Native/Fluent)

PROFESSIONAL SUMMARY

I am a results-driven Fullstack Web Engineer with 5+ years of experience engineering, scaling, and technically optimizing high-load platforms, with a deep architectural specialization in WordPress. My expertise lies at the sharp intersection of modern frontend ecosystems (React, Next.js) and enterprise-grade WordPress engineering-ranging from custom PHP 8+ architectures and secure plugin development to high-performance Headless CMS configurations and deep performance engineering.

My core competitive edge is a sophisticated, AI-first engineering philosophy. Rather than treating AI as a superficial coding assistant, I systematically integrate next-generation systems - including Claude Code, Cursor, and Google Antigravity - directly into the Software Development Life Cycle (SDLC), following a Spec-Driven Development (SDD) methodology: I define the technical specification first, then have AI implement and verify against it rather than improvise. I heavily leverage AI to automate complex development workflows and conduct deep technical research. By blending my practical architectural experience with AI-augmented development, I fast-track complex refactoring, automate regression checks, and drastically compress Time-to-Market-all while enforcing strict code quality, security, and architectural integrity.

Beyond core development, I actively apply this AI-first framework to continuous learning and knowledge management. I utilize advanced tools like Gemini Notebook for synthesizing complex technical documentation and accelerating research. To anchor this knowledge, I build my own custom educational and utility applications. This continuous loop of automated research, rapid prototyping, and self-directed application development allows me to master new technologies at an unprecedented pace and consistently bring cutting-edge solutions to the teams I work with.

CORE COMPETENCIES & TECH STACK

- **Frontend Engine:** React 19, Next.js 16 (App Router, Server Components, Server Actions), TypeScript, JavaScript (ES6+), Tailwind CSS, Bootstrap, semantic HTML5, BEM.
- **WordPress & Backend:** OOP PHP 8.x (PSR-12, WPCS compliant), WordPress Core

API, custom Gutenberg blocks (React), WooCommerce (enterprise level), WPGraphQL, REST API, MySQL query optimization.

- **Technical SEO & GEO:** Generative Engine Optimization (ChatGPT, Bing Deep Search, Gemini), LLM crawler management (llms.txt, robots.txt, AI.json), complex JSON-LD Entity Schema, Core Web Vitals (INP < 200ms, LCP < 2.5s, CLS < 0.1).
- **Privacy & Analytics Compliance:** Server-Side Tracking (sGTM), GDPR-compliant cookieless analytics integration.
- **AI-Augmented Development:** Google Antigravity, Claude Code, Cursor, Devin (Windsurf), Spec-driven development, context engineering, multi-agent workflows.
- **DevOps & Architecture:** Git Flow, CI/CD pipelines, Docker, Composer, NPM, headless configurations.

WORK EXPERIENCE

Fullstack Developer & Technical SEO Specialist | *Frontdeskhelpers*

Full-Time / Part-Time Remote (US & Spain Clients) | 05.2021 – Present

- Architected and managed high-performance WordPress and e-commerce projects for clients in the US, Spain, and Europe, utilizing Agile (Scrum) methodologies to ensure rapid, high-quality delivery.
- Audited and refactored core layout structures to ensure compliance with the European Accessibility Act (EAA Directive 2019/882) and US ADA, achieving strict WCAG 2.2 Level AA standards for screen reader and keyboard navigation.
- Optimized Core Web Vitals across complex templates, lowering Interaction to Next Paint (INP) to <200ms and Largest Contentful Paint (LCP) to <2.5s, maintaining Lighthouse performance scores of 95+.
- Integrated AI-augmented development protocols (Google Antigravity, Cursor, Claude Code) into the daily software development lifecycle, utilizing Spec-driven development to increase overall feature velocity by 35%.

Frontend Developer | *Agenturro*

Part-Time Remote | 09.2020 – 02.2021

- Translated complex, high-fidelity Figma and Adobe XD prototypes into pixel-perfect, highly responsive, and accessible interactive interfaces.
- Optimized core themes and checkout templates for custom Shopify and WordPress stores, boosting mobile performance metrics and organic search engine readability.
- Configured structured semantic data markup (JSON-LD FAQPage, Product, and Article schemas) to improve Google search rich snippet features and boost organic CTR.

Web Developer & SEO Consultant | *Freelance & Personal Projects*

03.2017 – 02.2024

- Successfully delivered and managed 50+ end-to-end web applications on Upwork and Freelancehunt, overseeing the full product development life cycle from server infrastructure to SEO campaigns.
- Engineered custom, Gutenberg block-based WordPress themes and plugins from scratch (using OOP PHP 8.x), strictly adhering to WordPress Coding Standards

- (WPCS) and minimizing legacy plugin dependency.
- Designed and executed advanced Generative Engine Optimization (GEO) strategies, structuring content based on the "Inverted Pyramid" format and high "Fact Density" to secure organic citations in AI-search engines (ChatGPT, Google AI Overviews, Gemini).
- Installed and configured automated cloud hosting environments, Redis caching, SSL parameters, and serverless edge middleware (Cloudflare Workers) to ensure 99.9% uptime for commercial web projects.

EDUCATION

- **Vinnitsa National Technical University (VNTU), Ukraine**
Bachelor's & Master's Degree in Computer Systems & Web Engineering | 09.2005 – 08.2010
- **Webdev Continuous Education (Lifelong Learning)**
Gemini Notebook with My own Microlearning apps. Continuous professional development via Coursera, Udemy, and Codecademy, focusing on React 19 Architecture, Next.js App Router, advanced technical SEO/GEO, GDPR policies, and EAA/WCAG accessibility compliance. | 10.2016 – Present
